

Welcome to Allplan QuickStart 2018!

We are happy to provide you with the appropriate Allplan project backup and Allplan Wizard for the installation of Allplan QuickStart 2018. The installation is very simple – please follow the steps below to do this:

1. Unzip the downloaded file **QuickStart English 2018.zip**
2. Import the QuickStart project backup into Allplan.
To do this, open your Allplan 2018 -> **New Project, Open Project...**

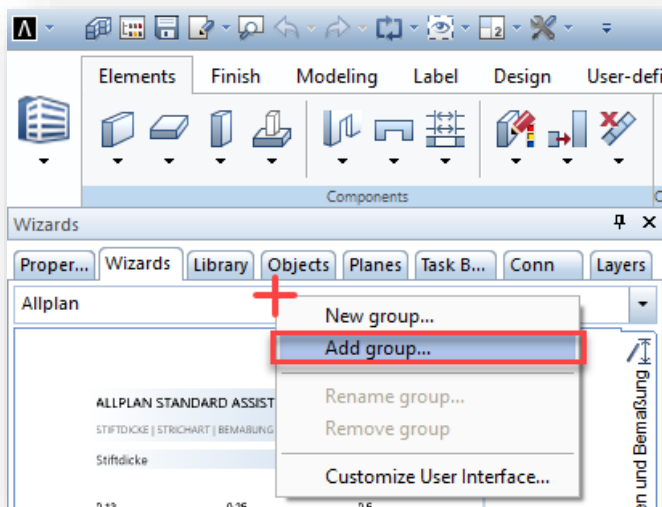

...and drag the downloaded file: **QuickStart – English.zip** simply by Drag & Drop over the project list. This will open an import dialog in which you can confirm (recommended) or change the name of the project, that you import right now – done.

3. Now create a new folder on your computer (at a location of your choice), copy the file **Wizard.zip** in there and unzip it.

Please note that this folder should not be moved again later.

Now switch back to Allplan, open the Wizard-Palette (see following picture) and click behind the currently set group (see red cross) with the right mouse button – in the context menu select then: **Add group**:

Open the folder you just created, select the file **Allplan Quickstart.nagd** and click **Open**.

You have now successfully installed the Allplan QuickStart project and the associated wizard and can begin with the QuickStart lessons.
